Compute derivatives of the functions (5)	Done	Great! All derivatives were computed correctly.	Done	All five derivatives were calculated correctly. Good job!
Compute derivatives and draw the plots of with the gradients (5)	Done	Correct step-by-step implementation of the gradient computation, backpropagation, and visualization. Good job on adding __sub__ function.	Done	All five gradients were computed correctly! I liked that you added __sub__ function even though it was not covered during the class. It is nice that you can apply new ideas based on the knowledge we learn during the classes!
